

# Production infrastructure that **stays up** — automated, observable, secure.

I'm **Nerses Antonyan**, a DevOps engineer and system administrator. After **13 years keeping regulated banking systems accurate and online**, I now design, automate and operate production infrastructure across Linux and Windows — with monitoring, CI/CD and infrastructure-as-code built in from day one.

SYSTEMS THAT ARE

Secure

Reliable

Observable

🕒 Remote & on-site    ≡ Full infrastructure lifecycle    🔒 Security-minded

## — WHY NERSES

### Financial-grade discipline, applied to infrastructure.

A rare combination: someone who has lived inside systems where an error or an hour of downtime has real consequences — and who now builds the automation and observability that prevent both.

#### Secure by design

Hardened servers, least-privilege access and hands-on penetration testing — finding weaknesses before attackers do.

#### Reliable by default

13+ years in banking, where downtime and inaccuracy weren't options — now built into how every system runs.

### Fully observable

Prometheus, Grafana and Zabbix wired in from the start, so incidents surface — and get resolved — before users notice.

### Automated end to end

Terraform, Ansible and Bash turn manual, error-prone work into reproducible, version-controlled infrastructure.

## — EXPERIENCE

## From bank ledgers to build pipelines.

A career built on operational accountability — carried from financial institutions into modern infrastructure.

◆ CURRENT FOCUS

● CURRENT

## DevOps Engineer & Infrastructure Consultant

Independent · Remote

Designing, provisioning and operating production infrastructure for clients — Linux and Windows servers, containerized workloads, CI/CD pipelines and infrastructure-as-code, with monitoring and alerting in place from the first deploy. Everything built to be **secure, reliable and observable** — now expanding into **penetration testing and security assessments**.

📅 May 2026 – Present 📍 Remote

>\_ Linux · Docker · Kubernetes · Terraform · Observability

Red Invest Group LLC

● CURRENT

Sep 2025 – Present

**Banking & Notarial Processes Manager**

Yerevan, Armenia

Artsakhbank

Feb 2024 – Sep 2025

**Dealer — Financial Operations Department**

Yerevan, Armenia · treasury & market operations

Artsakhbank

Nov 2018 – Feb 2024

**Senior Specialist — Credit Committees Support & Credit Analysis**

Yerevan, Armenia · risk & credit assessment

Artsakhbank

May 2012 – Nov 2018

**Specialist / Senior Specialist — CBA Reporting Department**

Yerevan, Armenia · regulatory reporting & data accuracy

— SELECTED WORK

## Infrastructure, shipped and running.

## SECURITY

● new direction

### Penetration testing & security assessment

Authorized vulnerability assessments and penetration testing — probing infrastructure, servers and web applications, then hardening whatever's exposed.

Pen testing

Vuln assessment

Hardening

Network security

## CI / CD

● live

### Automated deployment pipeline

End-to-end build, test and release with zero-downtime rollouts and automatic rollback on failed health checks.

GitLab CI

Docker

Bash

NGINX

## OBSERVABILITY

● live

### Monitoring & alerting stack

Metrics, dashboards and alert routing across a fleet of services — surfacing incidents before they reach users.

Prometheus

Grafana

Alertmanager

## IAC

● live

### Infrastructure as code

Reproducible environments provisioned declaratively, versioned in git and rolled out through peer review.

Terraform

Ansible

Linux

## PLATFORM

● live

### Containerized workloads

Orchestration for stateful and stateless services, with resource limits, secrets management and rolling updates.

Kubernetes

Docker

PostgreSQL

## RELIABILITY

● live

### Hardened Linux servers

Provisioning, SSH hardening, DNS/DHCP and least-privilege access for secure, maintainable server fleets.

Linux

SSH

DNS

Bash

**Artsakh State University**

Stepanakert, Armenia

**Bachelor's**

2006 – 2012

— LET'S TALK

## Looking for a DevOps engineer who **owns reliability**?

I'm available now for remote or on-site roles and infrastructure consulting.

Bring me your servers, pipelines and uptime targets — I'll bring the discipline to keep them running.
